

24th XBRL International Conference

“Transparency: with Available, Reliable, Comparable and Re-usable Data”

March 20-22, 2012
Abu Dhabi, UAE

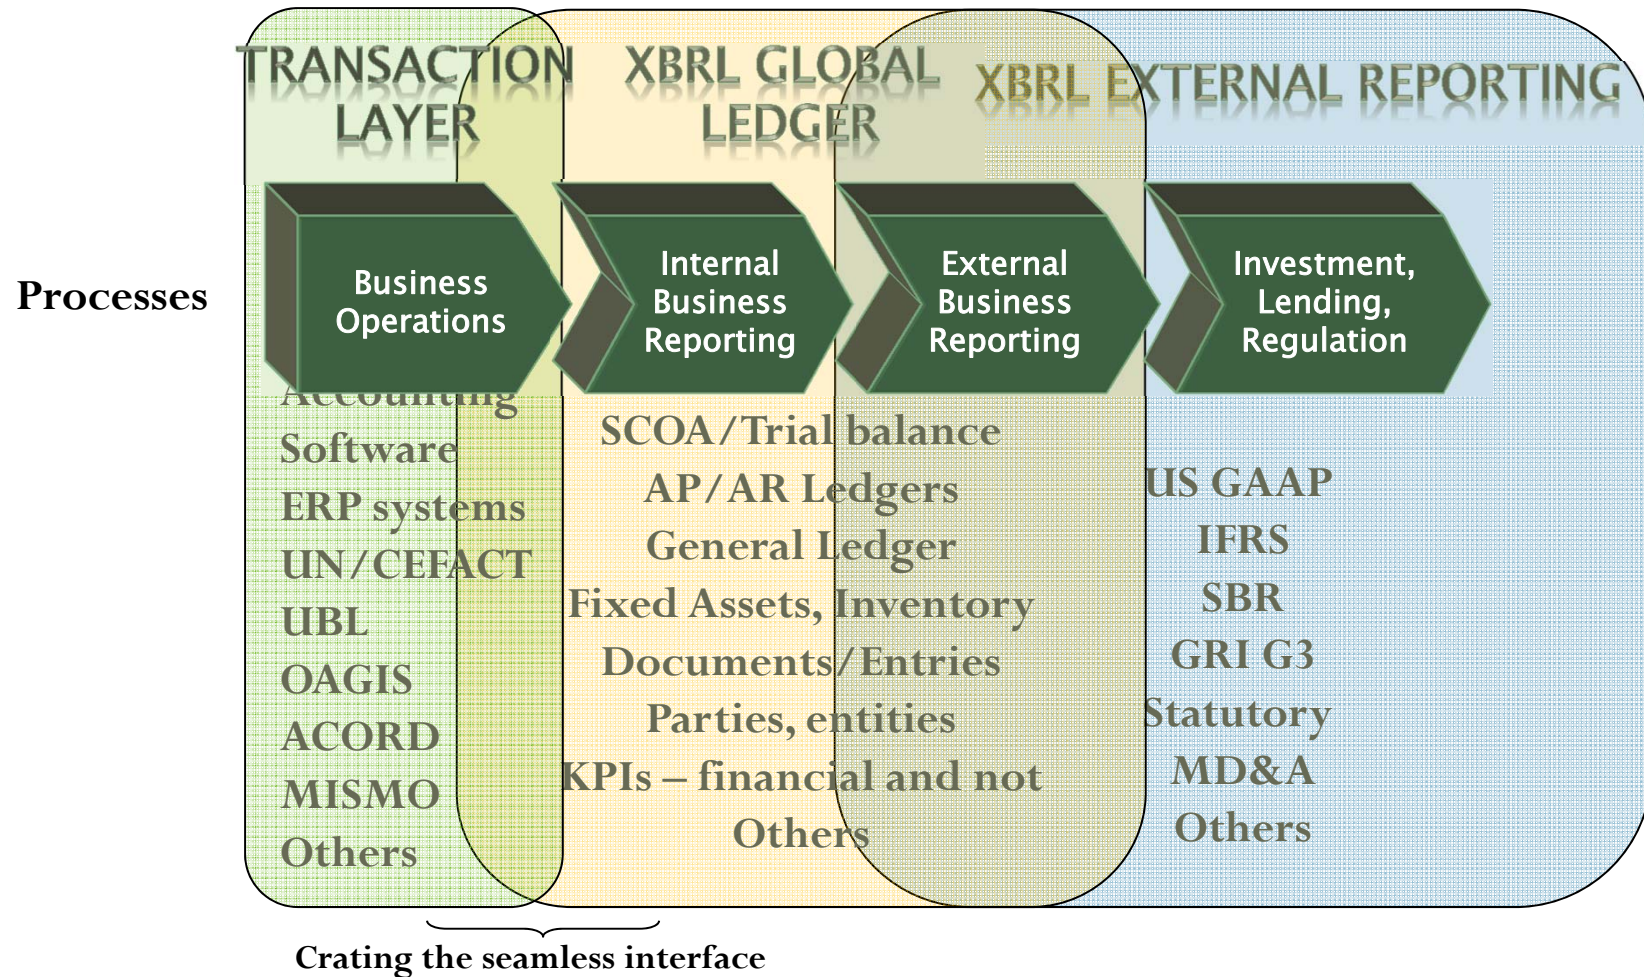

Project Implementation Workshop – Hands On
XBRL’s Global Ledger Framework
Gianluca Garbellotto

Overview

- ▶ XBRL's Global Ledger Framework is used to
 - Standardize business information found in source systems – ERP applications, accounting and business software
 - Standardize the mappings between that information and other XBRL reports for financial/business reporting – financial statements, tax returns, regulatory reports, internal management reports, etc.
- ▶ It is the enabler of the full integration of the Business Reporting Supply Chain

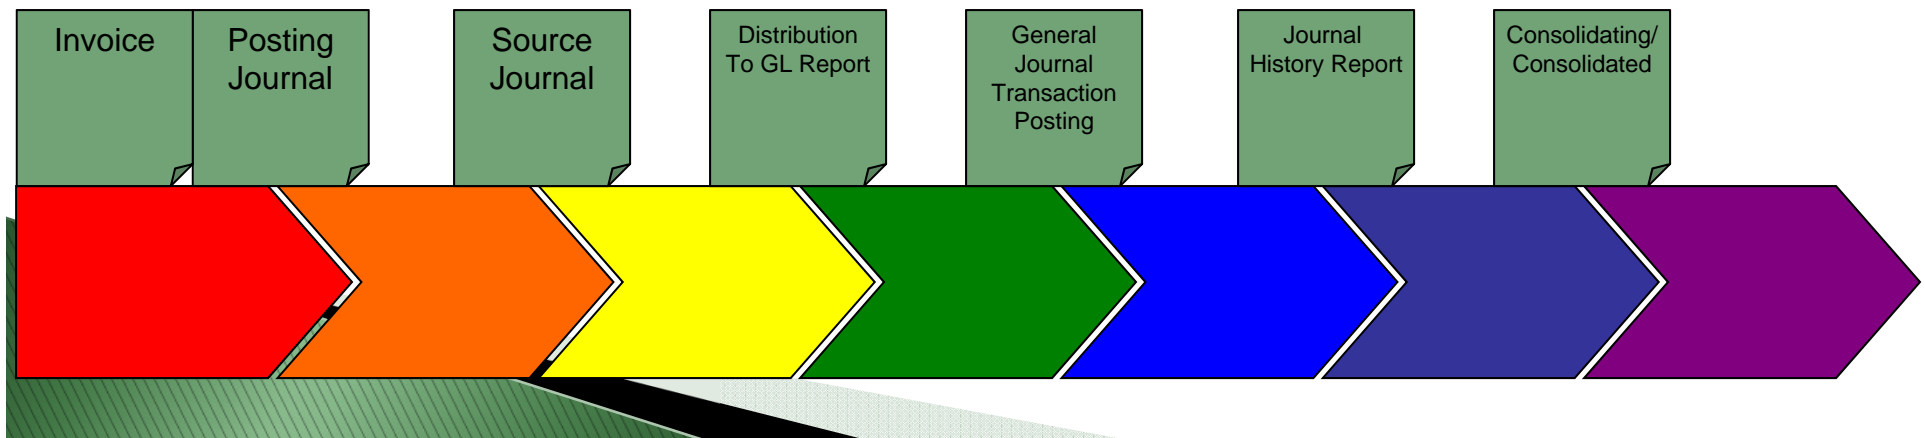

Business Reporting Supply Chain

XBRL GL: Represent Flow

1. **Trigger:** a source document is represented electronically
2. **Source Journal** The document is entered and posted, creating a source journal.
3. **Journal entries:** The accounting implications are gathered and prepared for the GL.
4. **GL Entries:** the journal entries are prepared for posting to the GL.
5. **Journal History:** The entries are posted to the Journal History.
6. **Consolidation:** The data at journal entry or trial balance level are brought together.
7. **Reporting:** Consolidated numbers combine for eventual reporting.

Steps

- ▶ Map a Trial Balance to the XBRL GL taxonomy
- ▶ Open the resulting XBRL GL instance in Excel
- ▶ Create a pivot table to analyze the XBRL GL data – with no specific XBRL add-on

Materials

- ▶ Source data: Trial Balance with beginning and ending balances and period changes (Trial_Balance.xlsx)
- ▶ Target: XBRL GL instance representing the Trial Balance mapped to a financial statements taxonomy (BP_TrialBalance.xml)
- ▶ XBRL Global Ledger taxonomy
<http://xbrl.org/int/gl/2010-04-12/GLFramework+ja-labels-PR-2010-04-12.htm>
- ▶ Altova MapForce and Excel Pivot Table

15	usfr-pte_StockholdersEquity	0	8.02		8.02
16	usfr-pte_UnrestrictedCash	81354	699504.56		780858.56
17	(blank)				
18	Grand Total	2547751.4	2547751.4		5095502.8

Conclusions

- ▶ This approach is applicable to the whole representational scope of XBRL GL not only the TB – any kind of business data found in ERP applications and other data stores
- ▶ Accessing/analyzing/reporting on XBRL GL data is independent from specific software applications and specific reporting purposes
- ▶ The theme of XBRL24 is Accessibility and Transparency – this is total accessibility and transparency of internal data

Cheat Sheet

- ▶ Launch MapForce
 - ▶ Insert – Text File (or other type of source)
 - ▶ Insert – XML/Schema File (XBRL GL)
 - ▶ Map
 - Line # to [lineNumber]
 - Account to [accountMainID]
 - Description to [accountMainDescription]
 - Amount to [amount]
 - D/C to [debitCreditCode]
 - Date to [postingDate]
 - ▶ Open resulting instance in Excel
 - ▶ Create pivot table with [summaryReportingElement] as Row Label and sum of [amount] as Values
-
