

XBRL Global Ledger Update and Trends

*Avoiding the dangers of leaping a
chasm in two jumps*

Eric E. Cohen

Co-founder, XBRL

Yokohama 7-Nov-2012

Agenda

- Backgrounder
- What's new?
- Today's intellectual exercise

"You cannot solve a problem from the same consciousness that created it. You must learn to see the world anew."

Albert Einstein

Some People Believe

- That XBRL is for sharing external facing information amongst shareholders
- That some other tool may be necessary for expressing complex information, such as ERP data, within organizations
- In fact, XBRL was designed with a much broader view
- And XBRL has published a standard for representing the data found within ERP systems ... XBRL's Global Ledger Taxonomy Framework
- Developed in collaboration with virtually every EDI and XML organization developing accounting standards

What is XBRL Global Ledger

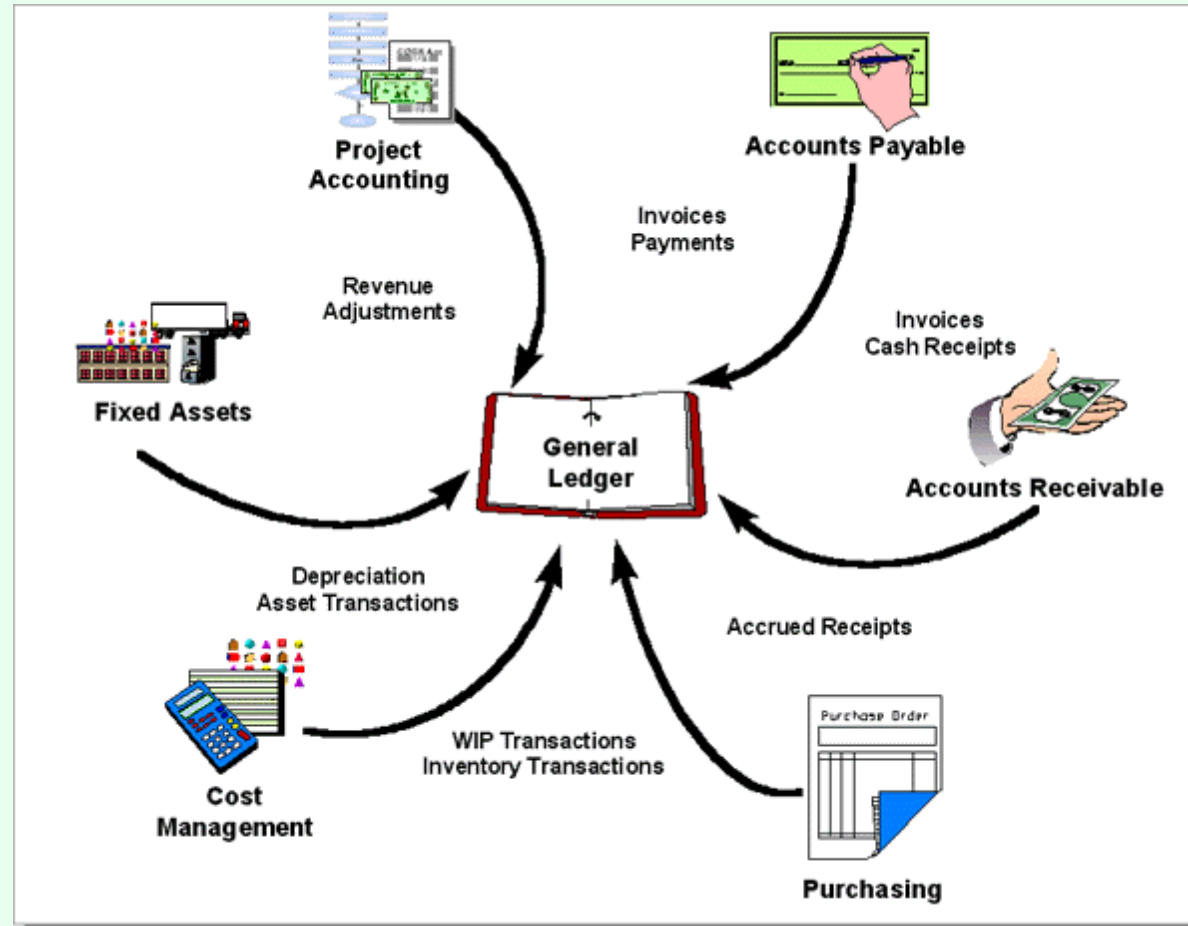

- Part of the broader world of XBRL
- The only taxonomy DEVELOPED by XBRL International
- An evolving, generic representation of the files in a typical ERP system: quantitative, qualitative
- An XML-based standard that can be used for import/export, Web services payload
- The bridge between source/target applications and XBRL reporting

What XBRL Global Ledger Can Represent

Independent

- *System*
- *Language*
- *Region*
- *Reporting area*
- *Process*
- *Chart of accounts*
- *GAAP*

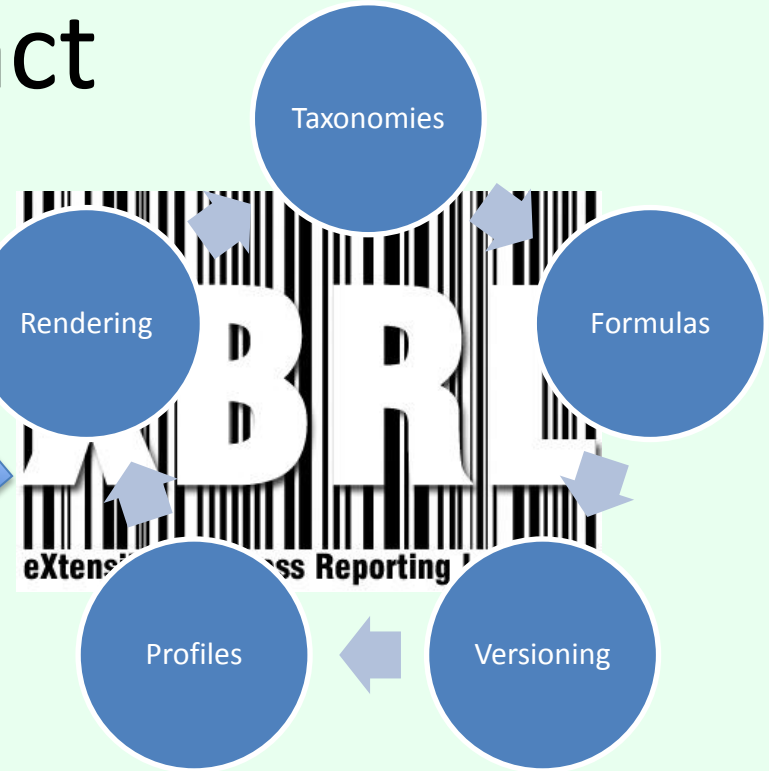

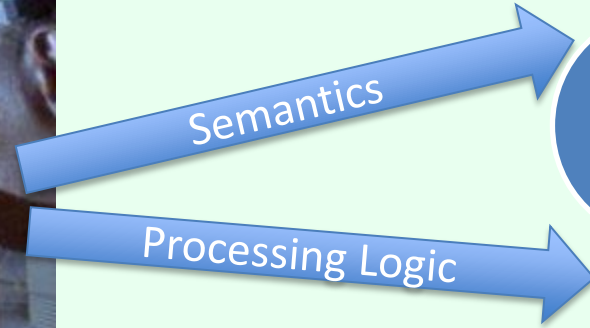

And able to bridge between them all – “the Great Reconciler”

XBRL Global Ledger

- Standardized internal, detailed data
- Supporting standardized processes

Getting Abstract

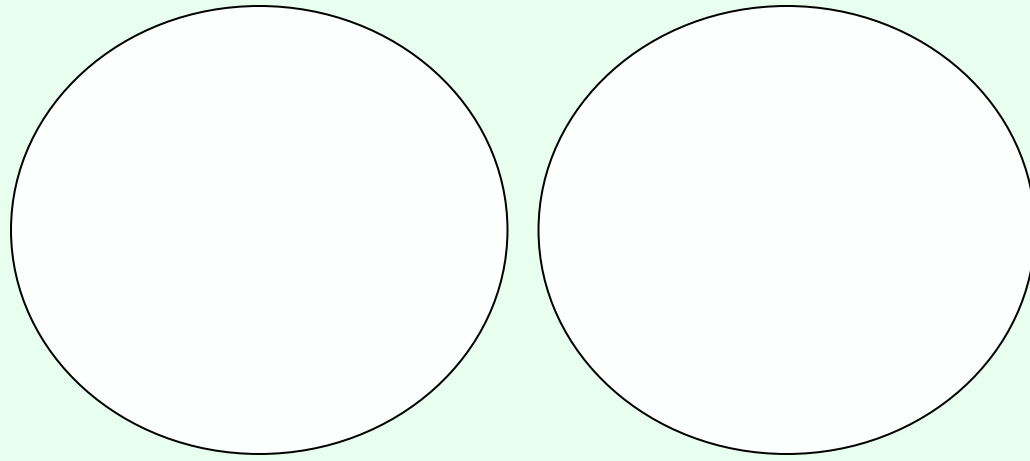

*Application-independent
Transparent
Accessible*

XBRL Inside ... Without Code Changes

- Removing “business logic” from applications
- Moving the logic to XBRL taxonomies and related artefacts
- Embedding **XBRL**... without code changes
- Flexible and open, adapts to changes without upgrades, add-ons or replacement
- “Cheap” technology?

Standardizing Every System with XBRL

Across Language
Across data definitions
Across file formats

System 1	System 2	System 3
Account#	勘定科目番号	Identificador de la Cuenta
Description	勘定科目説明文	Descripción Principal de la Cuenta
Amount	金額	Monto Monetario
PostDate	転記日付	Fecha de Asignación/Ingreso

XBRL GL is like

One type of ingredient

mimics many familiar things

XBRL GL “Profiles”

- Just tell me *exactly* what I
 - Must, Can, Must not
- Keeps XBRL GL open and flexible
- Provides structure for constraints in closed environments

Turkish Revenue – Battling Warehouses of Paper

e-Defter Paketleri

e-Defter Uygulaması Teknik Klavuzları ve indirilebilir paketleri aşağıda verilmiştir:

- [e-Defter Paketi](#)
- [e-Defter Yazılım Uyumluluk Onay Klavuzu](#)
- [e-Defter Yazılım Uyumluluk Taahhütnamesi](#)

e-Defter Uygulamasının Teknik Mimarisi

1 Sıra No.lu Elektronik Defter Genel Tebliği düzenlemesi gereğince yevmiye defteri ve büyük defter, XBRL GL e-defter format ve standartlarına göre hazırlanacaktır. Bu standartlar defterler kayıtlarının içeriği ve standartlarını belirlemektedir.

Genel Tebliğ düzenlemelerine göre söz konusu standartlara uygun olarak oluşturulan dosyaların e-defter olarak kabul edilebilmesi için mali mühür ile mühürlenmesi ya da güvenli elektronik imza ile imzalanması ve e-Defter Uygulaması aracılığı ile beratının alınması gerekmektedir. Konu ile ilgili detaylı açıklamalar **e-Defter Paket** dosyası içerisinde bulunan e-Defter Teknik Klavuz dokümanında açıklanmıştır.

- E-Defter dosyaları ilgili klavuzlarda belirtilen standartlar ve formata uygun biçimde hazırlanır.
- Hazırlanan dosya "defter" şema yapısında öngörülen alana yerleştirilir.
- Oluşturulan "defter" dosyası mühürlenir ya da imzalanır. (Bu şekilde oluşturulan dosya, mükellefin beratının aldıktan sonra defter olarak saklamak zorunda olduğu dosyadır. Ancak bu dosyanın defter olarak geçerli sayılabilmesi için e-defter beratının alınması zorunludur.)
- Mühürlenene ya da imzalanana "defter" dosyasının belli bilgileri alınarak "berat" dosyası oluşturulur.
- Berat dosyası mühürlenir ya da imzalanır.
- Mühürlü ya da imzalı berat dosyası paketlenir.
- Hazırlanan paket www.edeften.gov.tr adresinde bulunan e-Defter Uygulamasına giriş yapılarak yüklenir.
- Berat dosyası Gelir İdaresi Başkanlığı mali mührü ile de mühürlenerek indirilecek biçimde defter sahibinin erişimine açılır. (Erişime açılan e-defter beratı ile imzalı veya mühürlü defter dosyası birlikte elektronik ortamda muhafaza edilecektir.)

1. Adım - Mükellef Tebliğde belirlenen şartlar ve XBRL formatına uygun aylık defterini hazırlar

2. Adım - Gerçek kişi mükellef e-imza ile defterini imzalar. Tüzel kişiler Mali Mühür ile onaylar

3. Adım - onaylanan defterin imza/mühür değeri alınır

4. Adım - e-Defterin imza değerini taşıyan e-Defter Beratı mükellef tarafından elektronik ortamda hazırlanarak imzalanır/mühürlenir

3.3 Customer Master YYYYMMDD

The Customer_Master_YYYYMMDD file may be requested to be generated more than once for the period under review to accommodate changes

Field #	Field Name	Level	Flat File Data		XBRL GL Taxonomy Element	Description
			Data Type	Length		
1	<u>Customer Account ID</u>	1	TEXT	100	<u>gl-cor:identifierCode</u> for internal # with <u>gl-cor:identifierType</u> = {customer}	Identifier of the customer from whom payment is expected or to whom unused credits have been applied.
2	<u>Customer Account Name</u>	1	TEXT	100	<u>gl-cor:identifierDescription</u>	The name of the customer corresponding to the customer account ID as recorded in the customer master file.
3	<u>Customer Physical Street Address1</u>	1	TEXT	100	<u>gl-bus:identifierStreet</u> (*) with <u>gl-bus:identifierAddressPurpose</u> = "physical"	The customer's physical street address line 1.
4	<u>Customer Physical Street Address2</u>	1	TEXT	100	<u>gl-bus:identifierAddressStreet2</u> *	The customer's physical street address line 2.
5	<u>Customer Physical City</u>	1	TEXT	100	<u>gl-bus:identifierCity</u> *	The physical city where the customer is located.
6	<u>Customer Physical State Province</u>	1	TEXT	6	<u>gl-bus:identifierStateOrProvince</u> *	The physical state or province where the customer is located. Recommend ISO 3166-2.
7	<u>Customer Physical ZipPostalCode</u>	1	NUMERIC		Eric C	The zip code where the customer is physically located.
8	<u>Customer Physical Country</u>	1	TEXT	3	<u>gl-bus:identifierCountry</u> *	The country code where the customer is physically located. Recommend ISO 3166-1 Alpha

Today's Intellectual Exercise

The XBRL GL philosophy:

a. Is *still* ahead of its time

b. Has seen its time come and go

c. Is as valid today as it was when crafted

XBRL GL Philosophy

1. Represent what is found in the databases of accounting and operational systems. Stay away from calculated fields.
2. Represent both the exact content (audit) of those databases while allowing for normalization of key fields (data transfer).
3. Allow both modular and monolithic approaches to data representation
4. Use a generic and reusable approach where appropriate
5. Specialize only where absolutely needed
6. The originating document is key to the audit
7. The primary amount is key to the audit
8. XBRL GL should not be used for transactions
 - [i.e., for two way transactions – EDI – it is made to represent historical transactions]
9. XBRL GL should leverage the power of XBRL but be familiar to non-XBRL experts

Our analysts want to be able to slice and dice the data. We want the line items themselves to be relatively simplified – such as amounts as a data point – and then everything else be an attribute to the primary data point. Everything should be expressed as a multi-dimensional model. After all, everything ... time, organization ... is just a dimension.

Line item to line item mapping is the easiest. Our DBA are most comfortable when line items are put into the data dictionary, tracked simply, and then connections are made. To have to look at other elements or make any other survey of the *context* of the information is not acceptable. We want to know exactly and unambiguously what to do. File by file, document by document, field by field.
