

# Updates to Table Linkbase

## Model-based Overview

Herm Fischer

Rendering Working Group

(Models by Jon Siddle, CoreFiling)

# What is Table Linkbase?

- Abstract model for viewing (~presentation)
- Implementation of tables and form
- ~~Replaces presentation linkbase~~
  - Yes - for case of specifying rendering (e.g., SEC viewer)
  - No - for case of concept-to-concept hierarchy definition
- ~~Two~~ 2 ½ versions circulating
  - Eurofiling (2010)
  - Montreal PWDs (2011)
  - (½) Oxford model-based updates (Nov. 2012)

# Table Models (Oxford)

# Table Models

- Definition model
  - Models content of the linkbase
  - Independent of syntax
  - Independent of instance and its DTS
- Structural model
  - Represents structure of the table
  - Captures meaning of business information table
  - Independent of definition
- Rendering model
  - Structure and values for final output
  - All values and breakdowns projected onto X/Y/Z axes

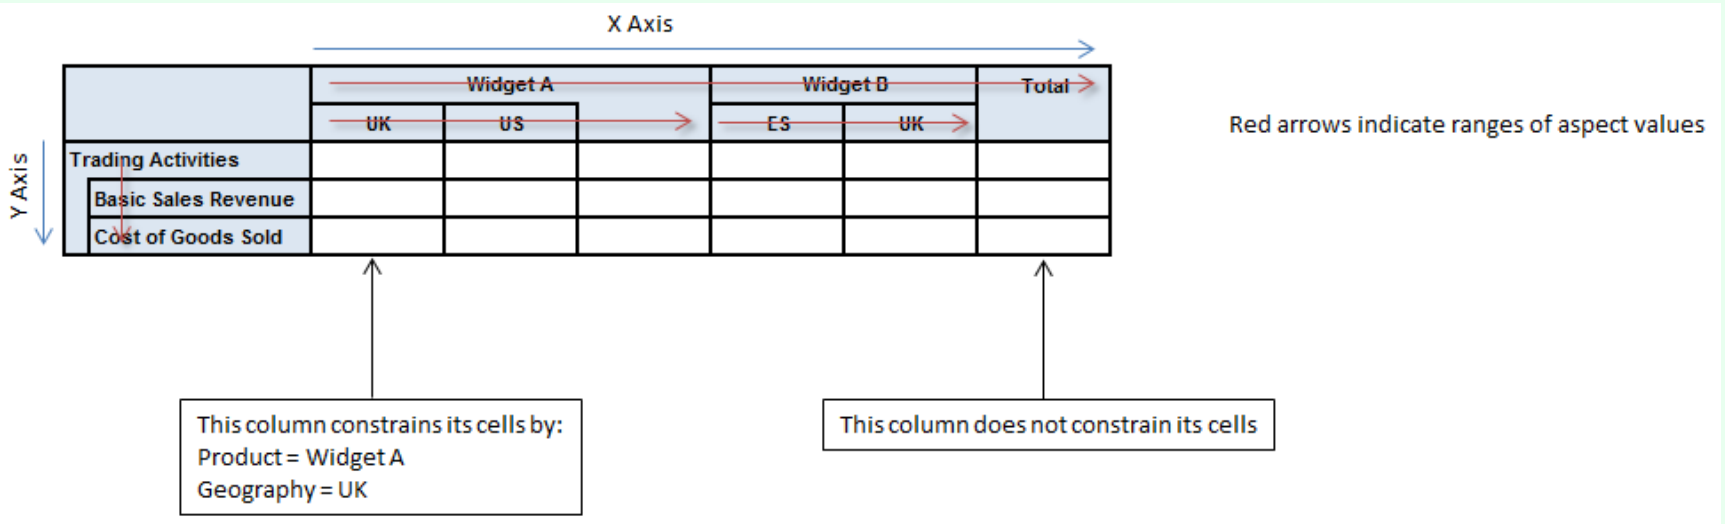

# Processes

- Resolution
  - Transform definition model into structural model
  - May require instance and its DTS
- Rendering
  - Transform structural model to rendering model
  - Project breakdowns onto X, Y, or Z axis
  - Create table headers (often from DTS labels)
  - Populate cell values (usually from instance)

# Other participants

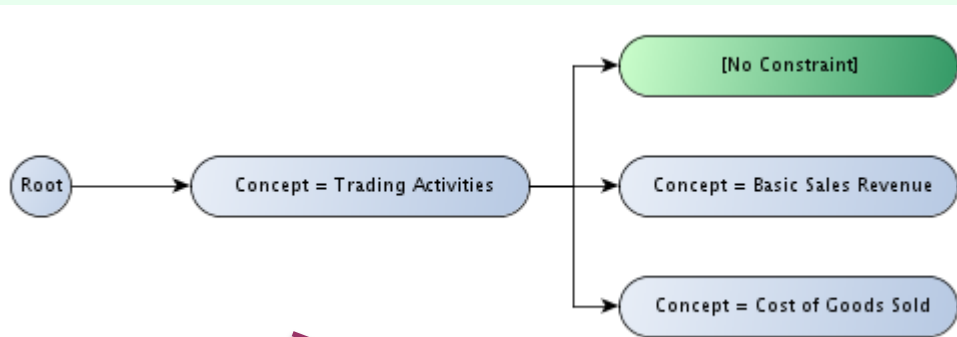

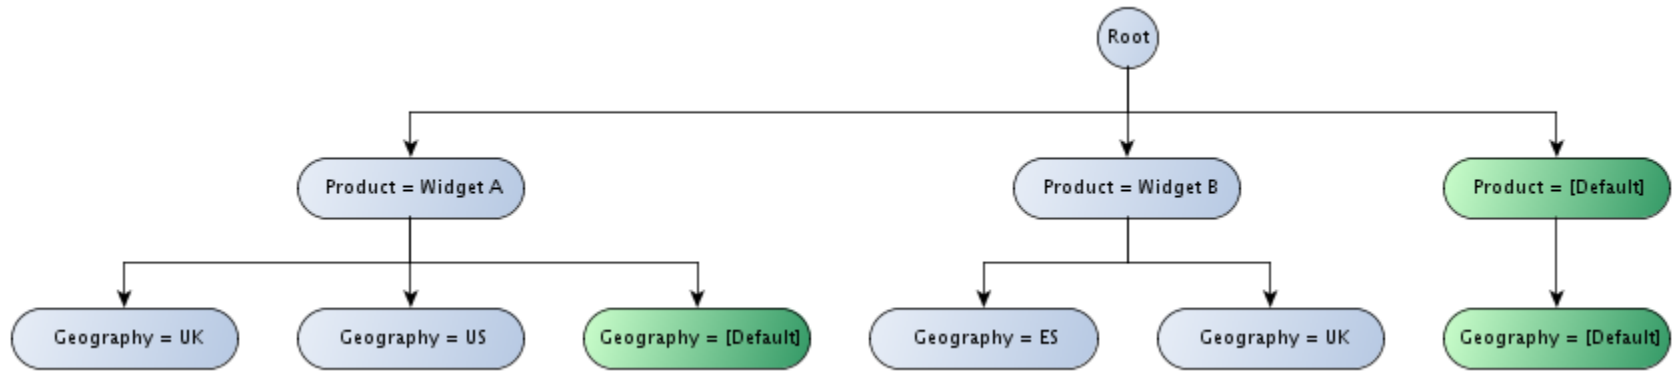

- Input linkbase
  - Syntax describing table definition model
- DTS
  - Taxonomies, linkbases to resolve definition into structure
- Instance
  - Source of facts, to populate rendering model

# Structural model

- Each axis is a series of trees
  - Tree defines logical breakdown of facts
    - Nodes specify constraints of aspects for cells
    - Closed node constrains single column/row
    - Open node expands during rendering to multiple columns/rows

# Breakdown trees

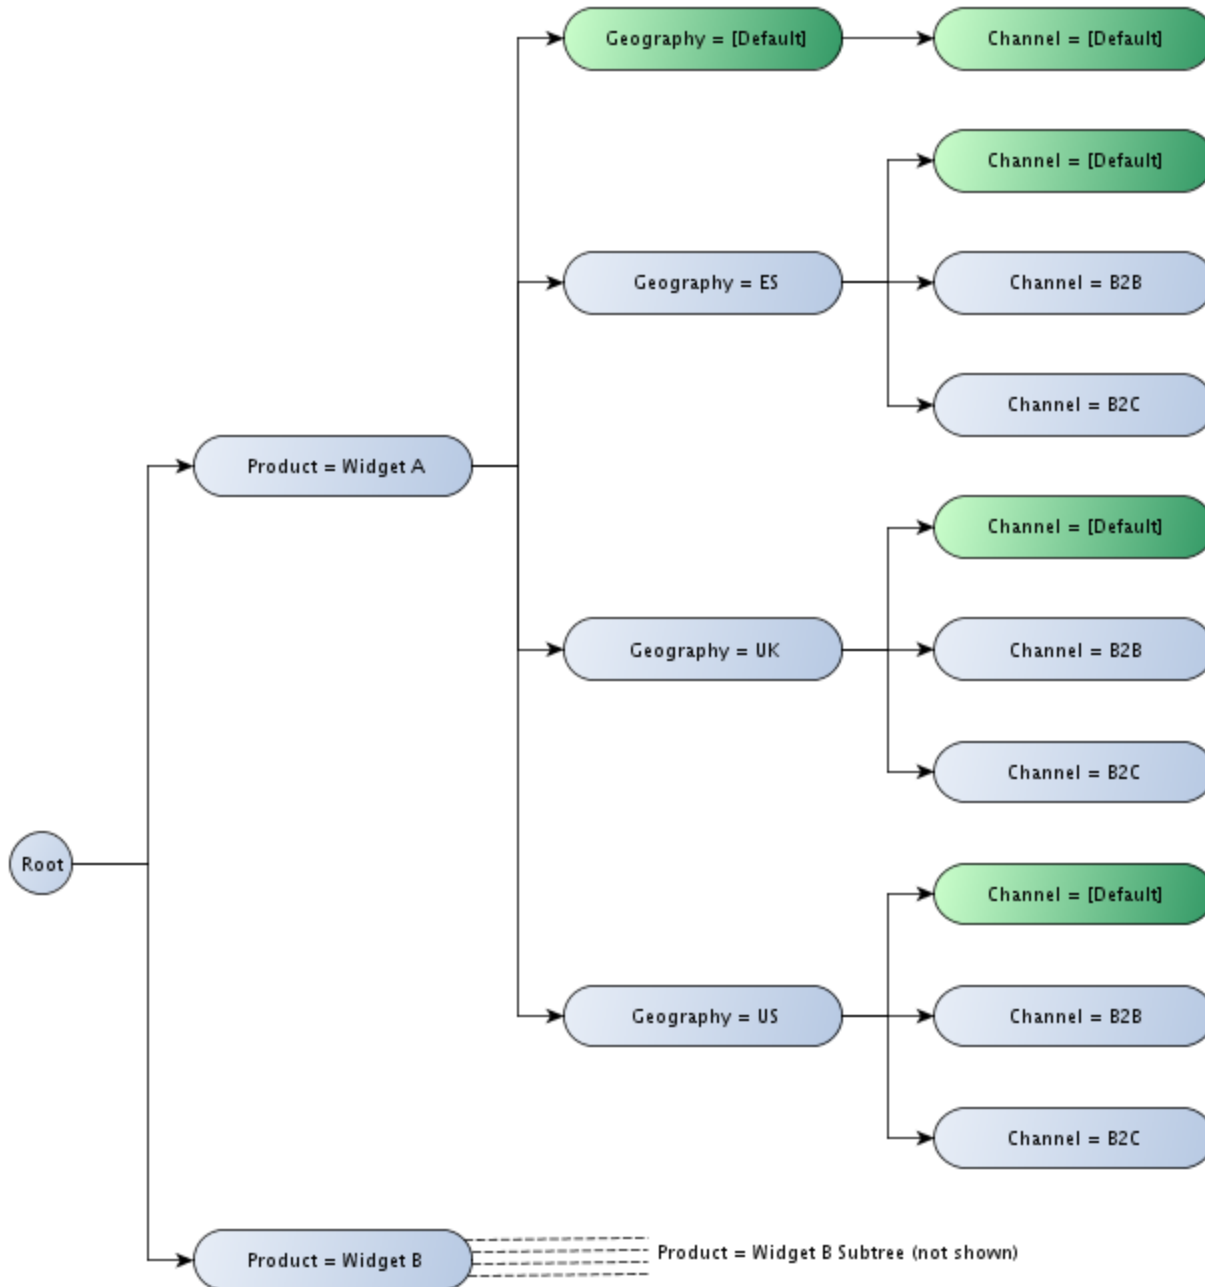

X Axis

	Widget A		Widget B		Total
	UK	US	ES	UK	
Trading Activities					
Basic Sales Revenue					
Cost of Goods Sold

# Table set

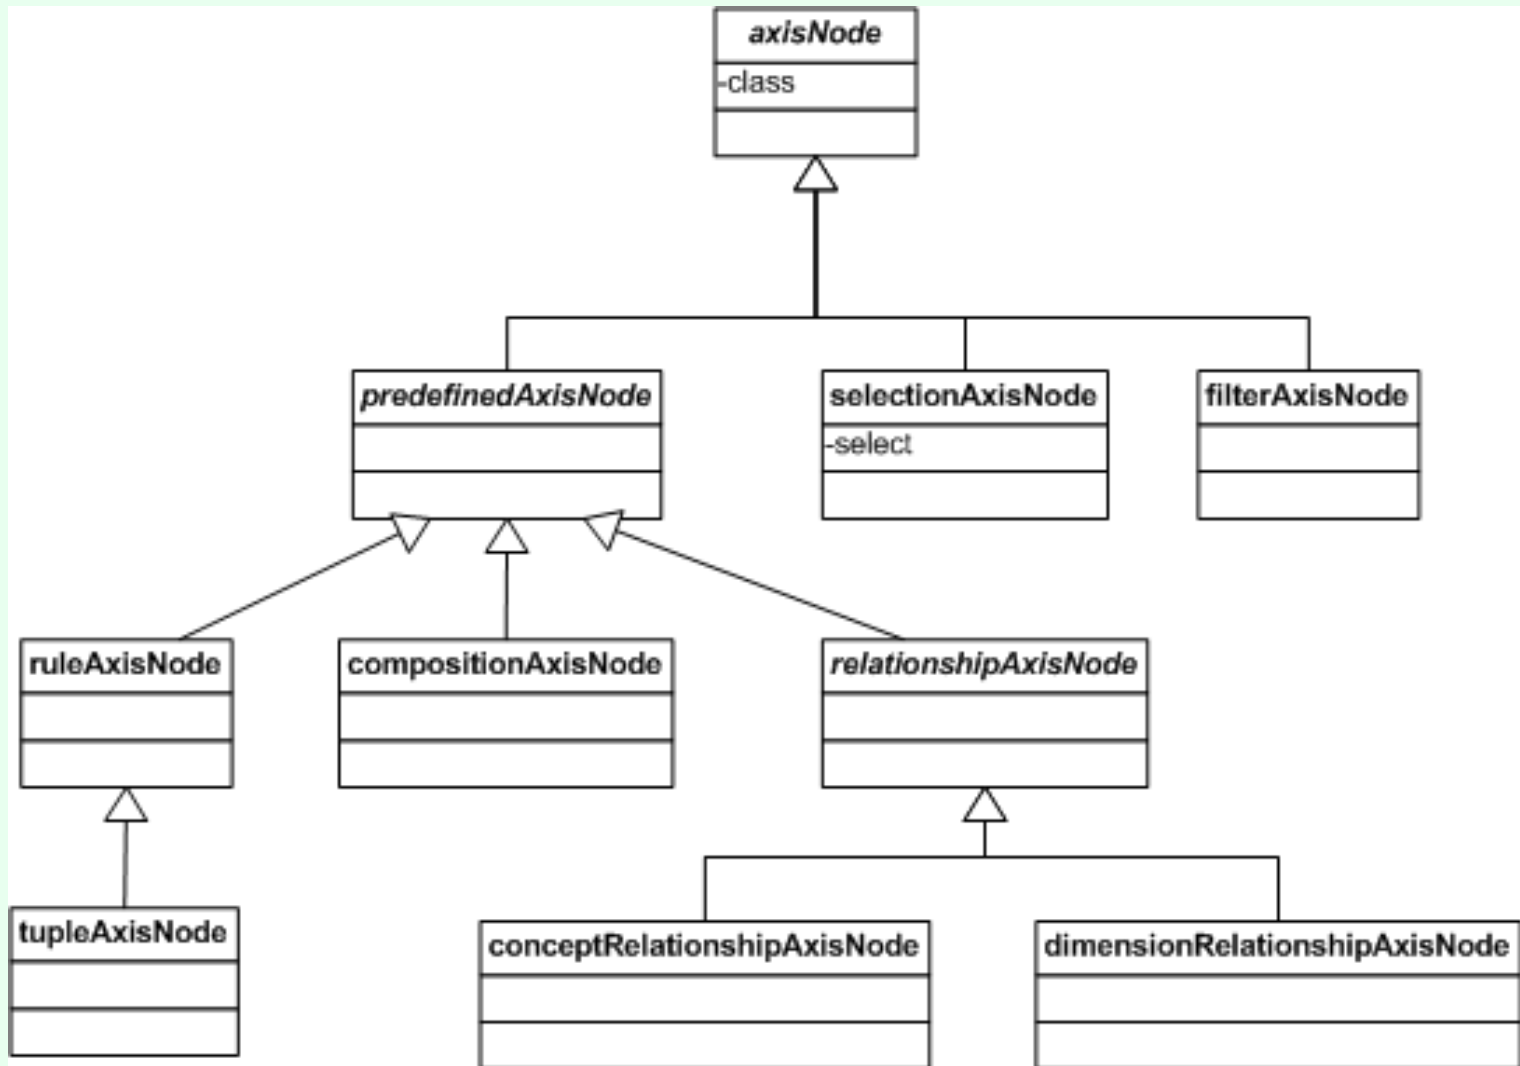

Balance Sheet	UK	US	ES
Assets			
Current Asset			
Fixed Assets			

Balance Sheet	UK	US	ES
Shares			
Class A			
Class B			
Class C			

- A sequence of tables with a common definition
  - Example, financial schedules of 2 link roles, balance sheets of assets and shares
    - Each table has different y axes despite having common definition

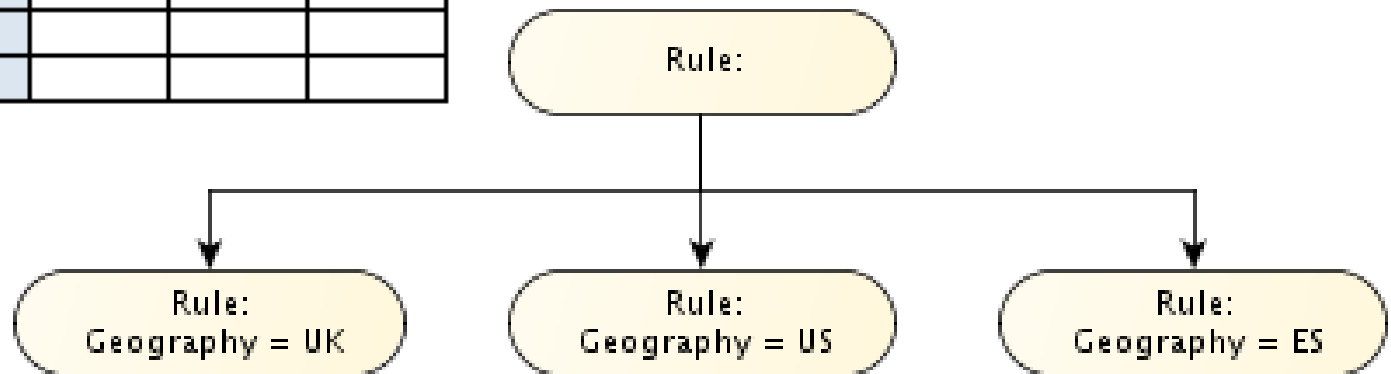

# Definition axis-node model
